

What other people are saying about Stimulator (visit our website to read the full testimonials)

"Stimulator pays for itself in the benefits it provides to both the land, and plants – from root to foliage..."

"I have found an increase in root growth which increases the plants' ability to uptake nutrients from the soil and help the microbial life in the ground... the plants look healthier and stronger"

"I have seen noticeably less stress on the treated trees during periods of hot weather. Good new shoot growth.

Also there seemed to be less mite damage on the treated trees as opposed to the untreated trees."

"Test areas were noticeably Greener, denser growth, and grew at a faster rate. Also, stock grazed the treated areas in preference to untreated areas.

I was very happy with the results on all plants the product was applied to including ornamentals, pot plants and vegetables."

"I am very impressed with the results so far and intend to continue the program as the health of the trees has improved massively already and with continued applications, I believe that they will only get better."

The key benefits of using Stimulator

- Instant uptake by plants.
- Increased photosynthesis.
- Increased yield and higher productivity.
- Cumulative results.
- Savings on your fertiliser budget.
- Increased soil carbon.
- Reduces transplant shock.
- No risk of burning plant foliage or roots.
- Increasing, feeding and diversifying beneficial microbes.
- Unlock existing nutrients.
- Plants produce increased fibrous roots.
- Plants with increased fibrous root systems have increased soil to root contact and will therefore require less water.
- Reduction in the need for pesticides.
- No risk of creating soil nutrient lock up.
- No leaching or pollution.
- Enhances soil balance.
- Increased nutrients in food with more flavour and colour.

What's the secret behind Stimulator?

We have harnessed a unique process of working with nature, for nature – that just makes sense. We believe you need to look after the soil for it to look after you, it's really that simple.

Stimulator is 100% natural and 100% organic. When given the chance, Stimulator will promote the return of native worms to the soil which will work hand in hand to not only build the soil biology, but enhance the effects of Stimulator.

Stimulator used consistently on the same site will be accumulative over time. Stimulator encourages soil life and nutrient development. This in turn encourages plants to produce more fibrous roots.

The nutrition contained within the liquid castings is 100% immediately available to plants upon application.

Stimulator contains significant amounts of trace elements. This aids in unlocking chemical nutrition locked up in the soil. Micro-organisms work further to break down conventional elements and organic matter into forms the plants can use.

Stimulator is a regenerative product and practice, and as such is plant nutrition – just as nature intended.

Whether you operate under organic, regenerative farming practices, or classic traditional farming – or somewhere in between – any and every one can reap the rewards of Stimulator.

"Look at the roots on this newly emerged pea.

Calder Permaculture Stimulator™ at 5 litres per tonne/seed.

No other product.

Grown organically.

*Cheers
Barry Edwards"*

Colin Gammon shows the growth in one season after application of Stimulator.

***Stimulator
Working with nature to help
soils thrive.***

The use of Stimulator has provided evidence of:

- Reduced transplant shock
- Resilience to frost & dry conditions
- Repellence to some invasive insects and fungi
- Enhanced seed germination
- Lower cost of production
- Preference of animals to graze Stimulator treated pastures & stubble
