

## What people are saying about Stimulator (visit our website to read the full testimonials)

*"I have introduced stimulator worm castings into my stonefruit and citrus orchard nutrition program for the last five years.*

*Aiming to grow a premium product my hope was to utilize the bio stimulation of Stimulator to enhance the conventional nutrition program which has been successful. Other benefits have been greatly improved soil structure with large amounts of worms in the soil. Highly recommend this product to improve your existing nutrition program. Richard Dow"*

*"Stimulator pays for itself in the benefits it provides to both the land, and plants – from root to foliage..."*

*"I have found an increase in root growth which increases the plants' ability to uptake nutrients from the soil and help the microbial life in the ground... the plants look healthier and stronger"*

*"I have seen noticeably less stress on the treated trees during periods of hot weather. Good new shoot growth.*

*Also there seemed to be less mite damage on the treated trees as opposed to the untreated trees."*

*"Test areas were noticeably Greener, denser growth, and grew at a faster rate. Also, stock grazed the treated areas in preference to untreated areas.*

*I was very happy with the results on all plants the product was applied to including ornamentals, pot plants and vegetables."*

*"I am very impressed with the results so far and intend to continue the program as the health of the trees has improved massively already and with continued applications, I believe that they will only get better."*

## The key benefits of using Stimulator

- Introduces diverse bacteria to the soil.
- Prepares plants for transplant and extreme weather events.
- Improves overall soil health and structure.
- Non-toxic and non-hazardous.
- Increases microbial activity.
- Natural source of Humus.
- Highly bio-available to plants.
- Provides nourishment to soil, consequently reducing fertiliser costs.
- An entirely natural product.

## What's the secret behind Stimulator?

We have harnessed a unique process of working with nature, for nature – that just makes sense. We believe you need to look after the soil for it to look after you, it's really that simple.

Stimulator is 100% natural and 100% organic. When given the chance, Stimulator will promote the return of native worms to the soil which will work hand in hand to not only build the soil biology, but enhance the effects of Stimulator.

Stimulator used consistently on the same site will be accumulative over time. Stimulator encourages soil life and nutrient development. This in turn encourages plants to produce more fibrous roots.

The nutrition contained within the liquid castings is 100% immediately available to plants upon application.

Stimulator contains significant amounts of trace elements. This aids in unlocking chemical nutrition locked up in the soil. Micro-organisms work further to break down conventional elements and organic matter into forms the plants can use.

## Stimulating the efficacy of chemical weed control

Heliotrope, cud weed, lettuce and fleabane all showing signs from previous days spraying Stimulator in collaboration with herbicides has dramatically increased the shut down of weeds in our cropping program both in and out of crop production. Allowing the chemicals to efficiently be absorbed by the target plants allows us to adjust rates for cost savings while at the same time softening the effects on crops and soil, therefore decreasing the chemicals footprint in our fragile soils.

Goschen / Swan Hill Victoria

I have been using stimulator liquid worm casting on brassica and cucurbit crops in the mallee region.

I have found an increase in root growth which increases the plants ability to uptake nutrients from the soil and help the microbial life in the ground. Visually, the plants look healthier and stronger and the head quality of brassicas has improved.

I have noticed higher brix readings in the plants and a higher tolerance of weather conditions- better disease resistance in wet weather or humid conditions and improved ability to deal with heat stress in summer ( less wilting of leaves and /or fruit loss )

Overall, stimulator has definitely added value to my crops and soil health.

## Stimulator Working with nature to help soils thrive.

Stimulator is a regenerative product and practice, and as such is plant nutrition – just as nature intended.

Whether you operate under organic, regenerative farming practices, or classic traditional farming – or somewhere in between – any and every one can reap the rewards of Stimulator.

*"Look at the roots on this newly emerged pea.*

*Calder Permaculture  
Stimulator™ at  
5 litres per tonne/seed.*

*No other product.*

*Grown organically.*
